What is SetTradeDelays function in Amibroker Formula Language? Most of the AFL code I see has this function SetTradeDelays (0,0,0,0); Please explain in detail what this function does. My initial thoughts are that this function is mainly used to control entry and exit price for a trade

What is SetTradeDelays function in Amibroker Formula Language?

The placeOrder* function will simply write order details into a file (C:\autotrader\data\order\orders.csv). A new line with the order details is appended to the file. AutoTrader software keeps a watch on this file, as soon as it is changed; AutoTrader reads it & parses the line. AutoTrader understands that there is a request to place an order.
