Ans. Due to increasing demand of energy the available sources of energy are depleting at fast rate. The use of fuels on large scale is releasing lot of gases and unwanted particles in the air. The gases like SO 2, NO 2 are causing acid rain that is destroying monuments, iron articles, bridges etc. The CO 2 released in air is causing green house effect that is leading to global warming which ...

Sources of Energy Current class 10 Notes Science

The reason? Solar power, or more accurately, the lack of it. Solar power has a thorny problem: It disappears after sunset. And California's electric grid is highly dependent on it now thanks to the political mandate known as the Global Warming Solutions Act of 2006 (AB 32).. AB32 required that 50 percent of California's electricity to be powered by "green energy" aka wind and solar, by ...
