Invention. The mathematical basis for Bézier curves—the Bernstein polynomials—was established in 1912, but the polynomials were not applied to graphics until some 50 years later when mathematician Paul de Casteljaou in 1959 developed de Casteljaou's algorithm, a numerically stable method for evaluating the curves, and became the first to apply them to computer-aided design at French ...

If you are like I was, your math is rusty enough that diving into Foley et al is like reading Greek. This is the best book I've found to teach the mathematical underpinnings of computer graphics. The book starts with basic trig and goes on to linear algebra and some calculus. After this book, you'll be ready to tackle most computer graphics texts.

In linear algebra, linear transformations can be represented by matrices. If T is a linear transformation mapping V to W and \vec{v} is a column vector with entries, then $T(\vec{v}) = \vec{w}$ for some $n \times m$ matrix A , called the transformation matrix of T . Note that A has rows and columns, whereas the transformation is from V to W . There are alternative expressions of transformation matrices involving row vectors that are ...
