Wind power isn't just a "stick a propeller on a surplus generator for free power" technology as it is portrayed elsewhere in the public domain. To the rescue, Dan B and Dan F have put together a very well balanced book on the subject of home brewed wind power that puts the reader in touch with the reality and provides the basis for a reasonable expectation from this resource.

The future of wind power, and distributed power generation, in our region is uncertain. Our hope is that by showing people what small wind turbines on farms look and sound like, and by building them and maintaining the turbines we build together, we can demonstrate their potential contribution to farm-, and homestead-scale community power generation in our part of the world.
