Linear Equations Infinite Solutions

Infinite Solutions (Many solutions) The term “infinite” represents limitless or unboundedness. It is denoted by the letter” ∞ “. Equations with Infinite solutions. To solve systems of an

equation in two or three variables, first, we need to determine whether the equation is dependent, independent, consistent, or inconsistent. If a pair of the linear equations have unique or infinite solutions, then the system of equation is said to be a consistent pair of linear equations. Thus ...

Hence the given linear equation has Infinite solutions or the number of solutions is infinite. Example 2: Consider the equation $15(x + 9) = 24x + 9 - (9x - 126)$ Solving we have $15x + 144 = 24x + 9 - 9x + 126$ or $15x + 144 = 15x + 144$. Subtracting $15x$ from both sides.

Linear equations with one, zero, or infinite solutions ...

An infinite solution has both sides equal. For example, $6x + 2y - 8 = 12x + 4y - 16$. If you simplify the equation using an infinite solutions formula or method, you'll get both sides equal, hence, it is

For a system of two linear equations and two variables, there can be no solution, exactly one solution, or infinitely many solutions (just like for one linear equation in one variable). If the two equations are in standard form (both variables on one side and a constant on the other side), then the following are true:
