Polymer Banknotes Q A Library Home Nfrn

Polymer banknotes are banknotes made from a synthetic polymer such as biaxially oriented polypropylene. Such notes incorporate many security features not available in paper banknotes, including the use of metameric inks. Polymer banknotes last significantly longer than paper notes, causing a decrease in environmental impact and a reduced cost of production and replacement. Modern polymer banknotes were first developed by the Reserve Bank of Australia, Commonwealth Scientific and Industrial Resea

Polymer banknote - Wikipedia

The polymer used in our banknotes is polypropylene, which is formed into a durable yet lightweight plastic film. It is coated with layers of special ink, which carry the printed design of a banknote. The polymer material allows us to include 'windows' or clear sections in the
